## CASE SCENARIO

Customer

Hi, currently I need to design a rotary stage of which I require precise 45° angular displacements continuously every 2 seconds. The diameter and the mass of the table would be 200 mm and 20 KG respectively.

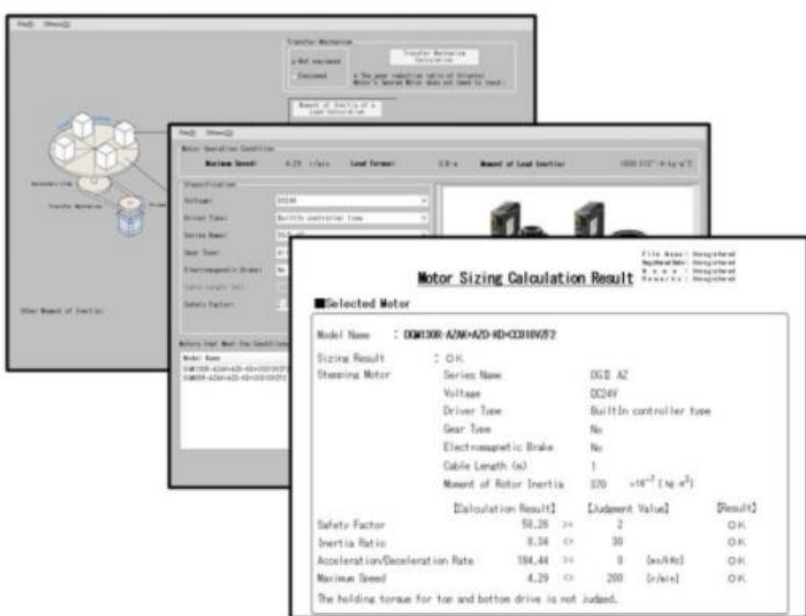

Hi, we have just the product for you!  
Let me introduce to you our **DGII** Series rotary actuator equipped with the **AZ** Series.

This is a complete integrated solution whereby you may mount your rotary stage directly onto our actuator.

Also, with the information provided, we had conducted a motor sizing for you and our recommendation would be  
**DGM130R-AZAK** (Rotary Actuator) + **AZD-KX** (Driver) + **CC030VZF2** (Connection Cable).

Customer

That's very good! This is very convenient. Thank you for the recommendation, how about the control in terms of programming?

We have a dedicated Support Software **MEXE02** which you may use directly via a Mini-USB to USB cable. You may download this directly on our website for free!

I see, would you be able to provide technical support if I face any troubles after purchasing?

Yes, we have a dedicated technical team that can assist you with any difficulties; you can contact us directly via E-mail, Hotline or Live Chat.

Thank you! I shall look into the **DGII** rotary actuator!
